

Jesús Osbaldo Ojeda Aké

Backend Software Developer

[Linkedin](#) • [Github](#) • [My portfolio](#) • ojedajesus232@gmail.com

Education

Universidad Politécnica de Quintana Roo

[January 2025 - Present]

Engineering in information technology and digital innovation with a specialty in software development.

High School: Centro de Bachillerato Tecnológico, Industrial y de Servicios (CBTIS) No. 111

[August 2021 - July 2024]

Computer Equipment Support and Maintenance Technician.

Experience

Universidad de Caribe

Systems Assistant - Internship

[May 2023 - April 2024]

- *Implementation of a preventive maintenance plan for computer equipment.*
- *On-site and remote technical support for users.*
- *Installation of network and telecommunications devices.*
- *Inventory control.*

Billbud

Full-Stack Developer - Temporary contract

[August 2025 - October 2025]

- *Applied principles of hexagonal architecture to build maintainable and scalable backend systems.*
- *Designed and implemented notification and push notification features using Go (Golang) and Flutter, integrated with Firebase Cloud Messaging (FCM).*
- *Strengthened skills in backend-mobile communication, cloud service integration, and multiplatform software development.*

Actually Projects I have participated in

Event Manager

Backend Developer

[January 2025 - Present]

Contributing to the development of an event management platform focused on ticket processing and secure user interactions:

- *Implemented authentication flow using JSON Web Tokens (JWT) to generate and validate tokens upon user login.*
- *Configured secure email delivery of JWTs to grant access to event-related forms.*
- *Designed and implemented backend logic to send automated emails when forms are updated, or when users request cancellations or refunds.*
- *Collaborating with the frontend team to enhance the ticket interface for a better user experience.*
- *Ensuring reliable and maintainable backend communication between the event system and email services.*
- **Tech stack:** Node js, Express, MongoDB, mongoose, JavaScript.

LabManager

Backend Developer / Teach Lead

[September 2025 - Present]

Leading the backend development of a laboratory management system;

- *Designed and implemented the authentication system using JSON Web Tokens (JWT) for secure access and session handling.*
- *Developed complete validation logic using middleware to ensure data integrity and secure API operations.*
- *In charge of the entire Patient Module, including RESTful API endpoints, services, and business logic implementation.*
- *Acting as Technical Lead, managing team coordination, reviewing code quality, defining technology stacks, and overseeing backend architecture decisions.*
- *Ensuring scalability, maintainability, and adherence to best practices in backend development.*
- **Tech stack:** Node js, Express, Supabase(PostgreSQL), Prisma, TypeScript.

Gym Management System – Personal Full Stack Project

Developing a personal full stack application to manage gym memberships, clients, and payments.

- *Designing the database schema and implementing CRUD operations.*
- *Building both backend and frontend interfaces to practice full stack development.*
- *Integrating authentication, member registration, and payment features.*

Tech stack: ASP NET CORE (Web API), React.js, Entity Framework, SQL Server.

My Skills

Technical:

- **Frontend Development:** *HTML, CSS, JavaScript, React, tailwindcss.*
- **Backend Development:** *Node js/Express, FastApi, ASP. NET.*
- **Databases:** *SQL Server, My SQL PostgreSQL, MongoDB, redis.*

Soft Skills:

- *Effective Communication.*
- *Teamwork & Collaboration.*
- *Problem Solving.*
- *Adaptability.*

Language:

- **Spanish:** *Native.*
- **English:** *A2.*
